FINAL PROJECTS

DNS TRAFFIC ANALYSIS OF INDONESIA CCLTD

My final project is about analysis of traffic DNS in Indonesia ccTLD. there are two process in this research, firstly how to get features to detect malicious or benign traffic in DNS. and secondly how to building good environment to process the data.

in this research i use bro network security monitor as data extractor DNS traffic and processing the data with decision tree algorithm to detect malicious or benign traffic. and all of the process is running on the big data environment that design and built by me.

in big data design environment i use kafka, spark, hadoop and mongoDB to get good performance for this case
